

v209 BEYOND-NMI deep ensemble + uncertainty + selective prediction. ECE=0.30 (poor calib due to 84% prevalence). Q4 (highest uncertainty) at chance. Selective prediction works: defer 40% → AUC 0.587 → 0.697.

D. AUC by uncertainty quartile
Q4 (highest σ) AT CHANCE. Round 39-42 flags uninterpretable: simple logistic+V_kernel STILL the robust winner; deep ensemble matches mask-only CNN; selective prediction at coverage=0.60 closes the gap
